Tables

	<i>Page</i>
1. Preparation of NALC-NaOH digestant-decontaminant solution _____	36
2. Smear evaluation _____	67
3. Numbers of indicated species of <i>Mycobacteria</i> recovered by State health departments of the United States _____	124
4. Identification of clinically important <i>Mycobacteria</i> _____	125
5A. Rapid growers _____	129
5B. Problems in differential identification-Rapid growers _____	130
6A. Niacin positive nonchromogens _____	132
6B. Problems in differential identification-TB complex _____	132
7A. Photochromogens _____	134
7B. Problems in differential identification-Photochromogens _____	135
8A. Nonphotochromogens _____	138
8B. Problems in differential identification-Nonphotochromogens _____	139
9A. Scotochromogens _____	141
9B. Problems in differential identification-Scotochromogens _____	144
10. Critical concentrations of antituberculosis drugs in Middlebrook 7H-10 medium _____	164
11. Preparation of drug media _____	174
12. Drug-containing discs for susceptibility tests _____	175
13. Monitoring of equipment _____	191
14. Quality control procedures _____	196

Figures

	<i>Page</i>
1. Laboratory suite _____	7
2. Removal of airborne particles _____	8
3. Isolation room _____	9
4. Biological safety cabinets _____	10
5. Several types of safety pipettors _____	12
6. Splash proof containers _____	13
7. Alcohol sand flask _____	13
8. Transfer spades _____	14
9. Packaging and labeling of etiologic agents _____	27
10. Efficiency of centrifugation _____	33
11. Combined lethal effect on Mycobacteria of temperature and time of exposure to a potentially lethal digestant _____	34
12. Hypothetical examples of overall kill with different digestants _____	35
13. Diagram for tenfold dilutions _____	38
14. Mylar bag CO ₂ incubator _____	54
15. Smear area _____	57
16. Recommended methods for examining acid-fast stained smears _____	64
17. Separation of Mycobacteria on the sole basis of growth rate and pigment production _____	122
18. Separation by growth rate and pigment _____	128
19. Nonphotochromogens-separation of pathogens and saprophytes using Tween hydrolysis test _____	137
20. Scotochromogens-separation of pathogens and saprophytes using Tween hydrolysis test _____	143
21. Drugs affecting special TB populations _____	161
22. Drug susceptibility test medium made with drug-impregnated discs _____	176
23. Drug susceptibility test _____	179
24. Drug susceptibility test _____	180

Color Plates

	Page
Microscopy	
1. Branching filaments with beading and small coccoid forms _____	65
2. Alternating clear and pink-stained bacilli that show . . . banding _____	65
3. Strands of bacilli in cords _____	65
Biochemical Test Reactions	
4. Arylsulfatase - CDC method _____	76
5. Color standards for arylsulfatase test _____	76
6. Wayne's phenolphthalein sulfatase test _____	78
7. Semiquantitative catalase test _____	82
8. Heat stable catalase test _____	84
9. Iron uptake _____	88
10. Growth on MacConkey without crystal violet _____	91
11. Niacin chemical test _____	94
12. Niacin paper strip test _____	95
13. Nitrate reduction test with liquid reagents _____	98
14. Combined niacin-nitrate test _____	102
15. Nitrate color standards _____	103
16A. Nonphotochromogen - pigment production _____	106
16B. Photochromogen - pigment production _____	106
16C. Scotochromogen - pigment production _____	106
17. Pyrazinamidase _____	109
18. Tellurite reduction test _____	112
19. Tween hydrolysis _____	115
20. Urease - Murphy Hawkins Disk Method _____	118
21. Urease - Steadham Method _____	119
22. Urease - Wayne Method _____	120
Colony morphology	
23. <i>M. tuberculosis</i> on agar and egg media _____	147
24. <i>M. simiae</i> colonies on agar and egg media _____	147
25. <i>M. bovis</i> colonies on agar and egg media _____	148
26. <i>M. asiaticum</i> smooth colonies on egg and agar media _____	148
27. <i>M. kansasii</i> colonies (rough and smooth) on agar and egg media _____	149
28. <i>M. marinum</i> colonies on agar and egg media _____	150
29. <i>M. avium</i> colony types on agar and egg media _____	151
30. <i>M. gastri</i> colony on egg medium _____	152
31. <i>M. malmoense</i> colonies on agar medium _____	152
32. <i>M. terrae</i> - <i>M. triviale</i> colonies on agar and egg media _____	153
33. <i>M. goodii</i> smooth colonies on agar and egg media _____	154
34. <i>M. scrofulaceum</i> smooth colonies on agar and egg media _____	154
35. <i>M. szulgai</i> colonies (smooth and rough) on agar and egg media _____	155
35D. <i>M. xenopi</i> colonies on agar _____	155
36. <i>M. fortuitum</i> colonies (rough and smooth) on agar and egg media _____	156
37. <i>M. chelonae</i> colonies on agar and egg media _____	157
